

# **SHETH L.U.J. AND SIR M.V. DEGREE COLLEGE OF SCIENCE**

**SUBJECT NAME: S101 Data Analysis with SAS / SPSS / R Practical**

## **PRACTICAL - 13**

**AIM** : Identifying and handling duplicates using distinct() (R studio ).

### **INPUT :**

# R Script: Identifying and Handling Duplicates

# Function: distinct() from the dplyr package

# Dataset: Student Records

# Load the library

library(dplyr)

# 1. SETUP: Create a Dataset with Intentional Duplicates

students\_df <- data.frame(

RollNo = c("S101", "S102", "S102", "S103", "S104", "S101", "S104"),

Student = c("RAJDEEP", "Vinod", "Bharghav", "Karan", "Rohit", "Amit", "Rohan"),

Subject = c("Maths", "Physics", "Physics", "Chemistry", "Biology", "Maths", "Computer")

)

print("--- 1. Original Dataset (Note 7 rows) ---")

print(students\_df)

# 2. IDENTIFYING DUPLICATES (Before removing them)

# Using group\_by() and count() to find duplicate rows

duplicates\_report <- students\_df %>%

group\_by(RollNo, Student, Subject) %>%

count() %>% # Counts occurrences

filter(n > 1) # Keeps only rows that appear more than once

print("--- 2. Identification Report (Rows that are duplicated) ---")

print(duplicates\_report)

# 3. HANDLING DUPLICATES: Exact Matches

# Scenario: Remove rows where EVERY column is identical.

clean\_exact <- students\_df %>%

distinct()

print("--- 3. Removed Exact Duplicates (distinct) ---")

# SHETH L.U.J. AND SIR M.V. DEGREE COLLEGE OF SCIENCE

SUBJECT NAME: S101 Data Analysis with SAS / SPSS / R Practical

```
print(clean_exact)
```

# 4. HANDLING DUPLICATES: Specific Columns (.keep\_all = TRUE)

# Scenario: We want a list of UNIQUE STUDENTS.

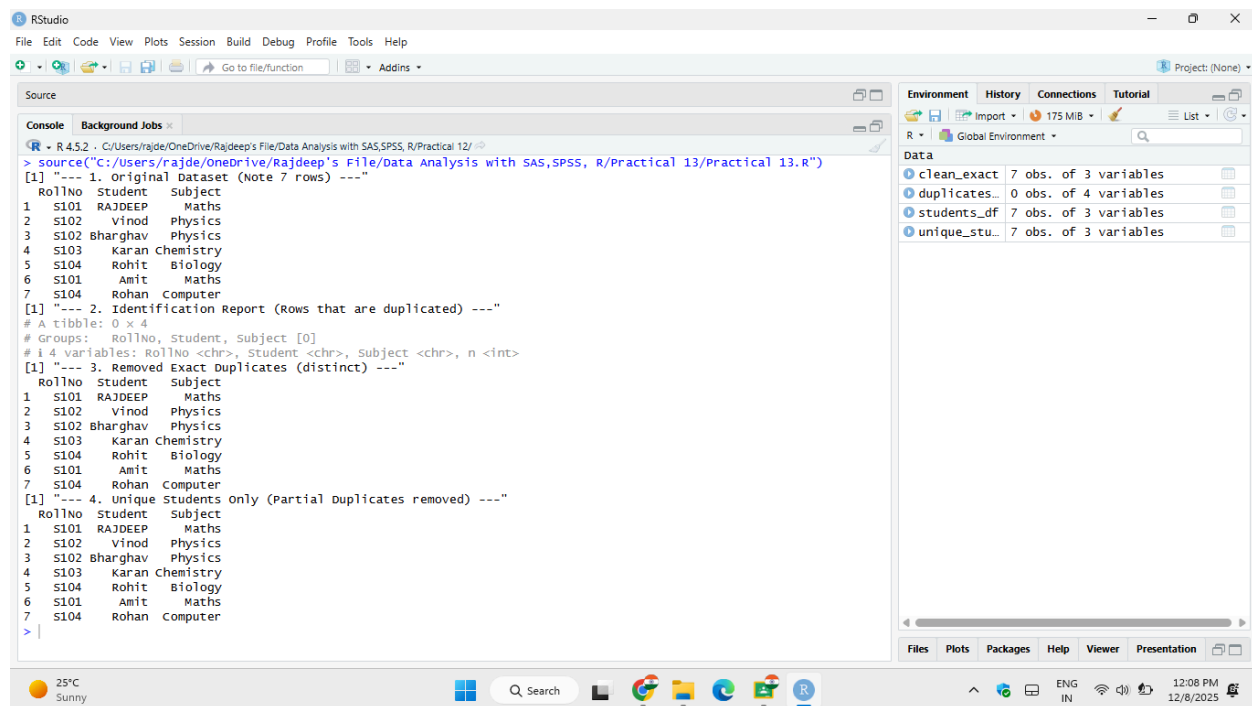

```
unique_students <- students_df %>%
```

```
  distinct(Student, .keep_all = TRUE)
```

```
print("--- 4. Unique Students Only (Partial Duplicates removed) ---")
```

```
print(unique_students)
```
